

GRIMALDI LINES

Motorways of the Sea

Frequent, Punctual and Fast innovative transport...

**Sicily • Sardinia • Spain • Libya • Tunisia
Malta • Greece • Morocco • Montenegro**

Maritime connections for transport of trucks, trailers, containers, project cargo, reefer cargo and dangerous goods

Founded in 1947, Grimaldi Lines is a leader in maritime transport with one of the biggest fleet of ro-ro ships in the world, for the transportation of trucks, trailers and exceptional vehicles.

During recent years, Grimaldi Lines has developed an extensive network of maritime connections – the so called, “Motorways of the Sea”. These routes are connecting Italy, Spain, Greece, Tunisia, Malta, Libya, Morocco and Montenegro.

The main purpose of these routes is to offer transport and logistic operators competitive and efficient shipping solutions, with reliability, punctuality, safety and cost savings at the forefront of operations as required by the global market.

Transport of exceptional vehicles

Thanks their modern technology and flexible cargo capacity, Grimaldi Lines ships allow to fully satisfy the transport needs of exceptional vehicles on long distances, offering to clients reliable and competitive solutions for the transferral of their units.

...in the Mediterranean and in Europe

The advantages of our services

Cost savings

Maritime transport of full trucks and trailers allows to save roughly the half of the costs normally necessary via road, thanks the lower expenses for fuel and the lower wearing of the vehicles.

With the ships it is possible the “unaccompanied system” which, through the embarkment of the single trailer, optimise the logistic use of the tractors, allowing better efficiency and reducing transport costs.

Speed and punctuality

By embarking onboard the ships, all trucks avoid the traffic and the long motorways queues, reducing transit time. All units can also travel during national holidays, in summer time, and during road restrictions for work in progress and road maintenance.

With an average speed between 22 and 28 knots, the ships assure full respect of delivery time at discharging destinations.

Driver safety

All driver can rest during the trip and arrive at destination with the digital tacograph at “zero”, in full accordance with driving rules. Moreover, travelling on the ships, truck drivers avoid to be victims of thefts or aggressions during their drive-breaks.

Cargo safety

During navigation all trucks and cargo are kept under video-surveillance 24 hours per day. Port terminals are directly managed from Grimaldi Lines personnel and fully equipped with entrance / exit video - control systems.

Environment Respect

The routes of Grimaldi lines help the environment because the CO₂ emissions produced by trucks when moving on road are significantly lower when they travel by sea. Through a calculation scheme certified by RINA, every transport company using Grimaldi Lines services may obtain certification about its environmental contribution in terms of CO₂ reduction in the atmosphere.

-53 % CO₂ emissions

Grimaldi Ship
vs road

Our Network

With Grimaldi Lines it is possible to move from Spain and Portugal directly to Greece, Turkey, Balkans area and Sicily thanks the "Long Bridge", the system which allows transport companies travelling on the line Barcelona – Civitavecchia to follow their route to Greece, departing from Brindisi, or to Sicily departing from Salerno, paying an unique discounted tariff valid for the two maritime trips. Leaving from Barcelona, the trucks arrived in Civitavecchia will find prosecution connections from Brindisi to Igoumenitsa and Patras or, if directed to Sicily, from Salerno to Palermo and Catania.

Thanks partnerships established with important rail operators it is today possible to travel to Greece directly from Frankfurt using the combination train + ship. From the very earth of Europe trailers arrive by train to the rail terminal of Venice where they are quickly transhipped onboard Grimaldi ships to Patras. This possibility allows to move cargo from Germany and central Europe to Athens and the whole Greece through an unique intermodal solution, without need to cover via road any kilometer.
